

What the World Needs. **NOW**

Fenway Park

groSolar installed a SHW system at Fenway Park, home of the Boston Red Sox, in April of 2008. This system is tied to Fenway's existing water system. The solar-heated water will supply the park and the restaurants on the lower levels of Fenway. "We are honored to assist Fenway and the City of Boston in their drive and determination to 'turn Bean Town into Green Town', as Mayor Menino so eloquently puts it." says groSolar's Marketing Director, Kelli Pippin. "Solar is our forte and it's also the cleanest, greenest weapon we know of in the fight against global warming."
