

Gobi Collector Plumbing

4 Gobi 408 and Gobi 410 on their sides (landscape)

Plumbing: Reverse return: first collector in, last out

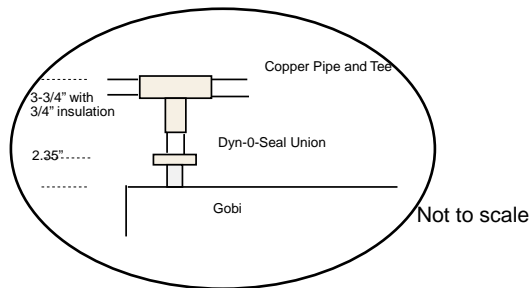

Plumbing Connections: Use 8 Dos Discs (which give you the male half-unions for connect piping, and the caps for the unused headers)

Mounting hardware:

Racking: Use four Side rack kits, one per collector that include all hardware to tilt up each individual Gobi

Flush mount (parallel to roof): Use 4 single Gobi Shingle mount or Tile mount kits to attach to each Gobi with rails running vertically; or use combination of Gobi Helio-Clip 08 (on short ends) and channeled rail with 3/8" x 1" stainless steel bolts and rail nuts.
